

CARE ADVICE

Deumavan® Intimate Care

Natural protective
skin care for men and
women

Deumavan®

Sensitive and intimate skin care for your body

The intimate skin areas are the area of our body that we prefer not to mention in front of other people. These include tissues such as around the anus and external genitalia such as the skin around the vagina for women and the skin around the penis and testicles for men. Sensitive skin needs special care and so do intimate skin areas.

Maintaining a functional skin barrier is essential when it comes to skin care and this applies also to sensitive and intimate areas of your skin. Sensitive and intimate skin hygiene and skin care should be as routine as good oral hygiene. Regular cleansing and care can lead to long-term, improved skin health.

These tissues can also be damaged by physical activity, for example during sports such as cycling or horse riding, or where the skin is exposed to a harsh external environment such as swimming or winter sports. With sensitive and dry skin even slight physical strains can lead to painful skin lesions and if these are not cared for then they might worsen or become infected.

Some existing options for cleansing sensitive and intimate skin can make the skin drier and more sensitive, thus making abrasions and inflammations more likely and potentially leading to symptoms such as inflammation, itching, burning or pain. That's why Deumavan® has been specifically formulated for sensitive and intimate skin care.

What are the symptoms?

In spite of the body's natural defences, sensitive skin and skin in the intimate tissue areas can still become irritated, inflamed and itchy.

What causes the symptoms?

There are multiple possible causes for these symptoms:

- sensitive or dry skin
- skin irritated by physical activity such as cycling or horse riding
- skin exposed to a harsh external environment such as swimming or winter sports.
- over-intensive washing
- lack of attention to personal hygiene
- changes in hormone levels, e.g. during menopause

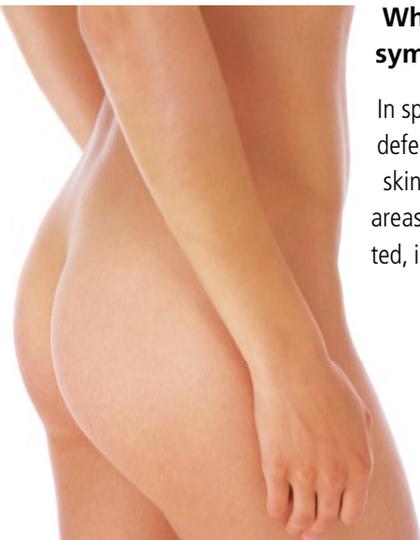

Of course, you should consult your Doctor in case symptoms persist or you need treatment for a skin infection as, for example, fungal or bacterial infections.

With sensitive or intimate skin, repeated washing with standard cleansing products such as soaps, or over-intensive use of toilet paper or cleansing wipes can reduce or weaken the natural protective functions of your intimate skin. This protective layer can then become hypersensitive, irritated and painful.

How is Deumavan® different?

Deumavan® Schutzsalbe is formulated specifically to protect sensitive and intimate skin areas from irritation and damage that might otherwise lead to long-lasting symptoms, wounds or even infection.

Deumavan® Schutzsalbe acts to promote the skin's natural protective barrier as its non-aqueous (waterless) formulation enhances natural skin moisturisation and provides a barrier to potential infection.

Deumavan® was developed in Germany and contains high purity, high quality ingredients in accordance with German national quality standards.

Deumavan® is hypo-allergenic making it ideal for people prone to skin allergies.

Deumavan® is free from additives such as parabens, stabilisers or preservatives.

Deumavan®'s exceptionally soft and soothing consistency enables easy application on even the most sensitive skin areas. If your skin is particularly irritated, applying Deumavan® may in some cases lead to a slight rash but this should not last long. If you get worsening of your symptoms you should see your Doctor.

Deumavan® will not stain your clothes.

When to use Deumavan®?

You can use Deumavan® in a number of sensitive or intimate skin care situations:

- protecting or caring for irritated, sore or damaged skin
- protecting sensitive skin from injury due to physical/sporting activity or harsh external environments
- for washing sensitive or intimate skin without using harsh soaps etc.
- for feminine hygiene during periods (menstruation)
- for comfort and cleansing before or after sexual intercourse
- for cleansing intimate tissues following urinary or bowel incontinence
- before or after bowel movements

How to use Deumavan®?

Thanks to its mild ingredients, Deumavan® is suitable for long-term application and is also suitable for the cleansing and care of sensitive or intimate skin.

Ensure that your hands are clean.

When cleansing a sensitive area ensure that you don't introduce potential contamination from other areas. When cleansing intimate areas of skin make sure that you do not introduce contamination from your anus or other areas. To ensure that you don't introduce contamination to your urinary tract always clean intimate genital tissues using a front to back movement, i.e. cleaning from your vagina or penis towards your anus.

The Deumavan® range

Deumavan® is available as medical device:

- Deumavan® Schutzsalbe Neutral 50 ml (tube), 125 ml (tube)
- Deumavan® Schutzsalbe Neutral 100 ml (pot)
- Deumavan® Schutzsalbe with lavender 50 ml, 100 ml (pot)
- Deumavan® Schutzsalbe with lavender 50 ml, 125 ml (tube)

and as cosmetic product:

- Deumavan® Waschlotion sensitiv neutral 200 ml (bottle)
- Deumavan® Waschlotion sensitiv with lavender 200 ml (bottle)

Deumavan® Neutral intimate hygiene care

Deumavan® Neutral is a hypo-allergenic, non-aqueous and fragrance-free formulation for intimate care and hygiene. Deumavan® contains Vitamin E, which is extremely important for skin-care. Deumavan® is particularly suitable for those allergic to fragrances as well as for the cleaning and care of the delicate skin of babies and children.

Deumavan® intimate hygiene care with lavender

Deumavan® with lavender using the same hypo-allergenic, non-aqueous cream as Deumavan® Neutral but with a delicate and relaxing lavender fragrance.

Deumavan® sensitive wash lotion

Deumavan® sensitive wash lotion is particularly suitable for cleansing intimate skin before applying Deumavan® Neutral or Deumavan® Lavender. Deumavan® sensitive wash lotion is also ideal for use when shaving sensitive skin or intimate skin areas.

IMPORTANT INFORMATION: Deumavan® is a medical product but does not replace necessary, existing prescriptions. However, Deumavan® can accompany and support such measures.

Deumavan® should not be used as a lubricant in conjunction with condoms containing latex!

Due to its skin compatibility for dermatological patients and patients with allergies, Deumavan® Schutzsalbe Neutral is recommended by the Deutsche Haut- und Allergiehilfe e. V.
