

FREQUENTLY ASKED QUESTIONS ABOUT Deumavan

Will my skin tolerate these products?

All products (Neutral) have been dermatologically tested on sensitive skin by the Dermatest Institute and received an excellent rating. The Vaginal Ovules, Protective Ointment Neutral, and Washing Lotion Neutral are hypoallergenic.

The formulations of all products are pH-friendly. The Dermatest Institute even confirmed the microbiome-friendliness of the Vaginal Ovules with an excellent rating.

HELP WITH VAGINAL DRYNESS

Vaginal dryness can occur, e.g. during the menopause, in the postpartum period/when breastfeeding, due to stress, or as an accompanying symptom of cancer therapy. The aim is to moisturize, soothe, and protect the mucosa.

**Deumavan®
Vaginal Ovules**

- Moisturizing and lipid-replenishing: with hyaluronic acid and aloe vera
- Alleviates irritation, itching, burning, and pain during sex
- Forms a fine protective film as they melt
- Hypoallergenic & microbiome-friendly (Dermatest 04/2025)

Can men use Deumavan?

Yes – the Protective Ointment, Washing Lotion, and Intimate Care Cream can be used by both women and men.

Isn't washing with warm water enough?

Warm water alone can dry out the skin and disrupt the natural acid mantle. For daily hygiene, a mild, pH-friendly (slightly acidic), soap-free cleansing routine is often gentler on the skin.

Can I use Deumavan during sports or cycling?

Yes. The Protective Ointment can be applied before physical activity as an external protective film to help reduce friction; reapply thinly after physical activity if needed.

Can I use Deumavan as a cancer patient?

Generally yes. If you are currently undergoing cancer therapy or have broken skin, please discuss use with your treatment team. All products are hormone-free.

Can I combine Deumavan products?

Yes, depending on your needs: for example Deumavan Protective Ointment for the external intimate skin and Vaginal Ovules to moisturize the vaginal mucosa.

When should I seek medical advice for my symptoms?

Seek medical advice if you experience severe, additional, or persistent symptoms, pain, fever, bleeding, unusual discharge, blisters/sores, or if you are unsure.

How to Use & Important Information

- Intensive treatment: 1 ovule per day for 10 days. Maintenance treatment: 1 ovule every 3 days – or as advised by a doctor.
- Insert deep into the vagina while lying down, ideally before going to sleep. Do not store above 25 C.

Do not use latex condoms and follow the instructions for use.

Deumavan Protective Ointment Neutral and Lavender. Medical device for daily local, external protection of the entire intimate area (external female and male genitalia, perineum and anal area). To alleviate symptoms such as itching, burning, reddening, swelling, dryness and soreness. To prevent lesions and irritation after sexual contact and other mechanical stresses. Do not use latex condoms (use polyurethane or AT-10 condoms instead). Breastfeeding mothers should not use the ointment in the breast area. Please follow the instructions for use. **Kaymogyn GmbH, Dietzgenstraße 79, 13156 Berlin**

Deumavan Vaginal Ovules. Medical device. For vaginal use. Moisturizes, protects, and calms the vaginal mucosa. To alleviate symptoms such as irritation, itching, burning, pain during sex, and vaginal dryness. Suitable during the menopause, after chemotherapy or radiotherapy, in diabetes, during stress, and after giving birth. 1 ovule per day (intensive treatment) or every 3 days (maintenance treatment). Do not use if you have a known allergy to the ingredients. Only use after consultation with a doctor during pregnancy and breastfeeding. Follow the instructions for use **Kaymogyn GmbH, Dietzgenstraße 79, 13156 Berlin • www.deumavan.com**

Smart care down there

CARE RECOMMENDATION FOR THE INTIMATE AREA

Medical skin
protection and care
for the intimate area

According to Prof. Dr. Eiko Petersen

WHAT DO YOU NEED RIGHT NOW?

External or internal – acute or daily?

Acute relief for women and men (external use)

Deumavan®
Protective Ointment

Daily care for women and men (external use)

Deumavan®
Washing Lotion & Intimate Care Cream

Help with vaginal dryness (internal use)

Deumavan®
Vaginal Ovules

External = vulva/penis, perineum, anal area
Internal = vagina

WHY THE ITCHING AND BURNING?

Discomfort in the internal and external intimate and anal area has many causes, which are not always infectious.

- Hormonal, metabolic, or therapy-related**
 - during the menopause, during pregnancy/when breastfeeding
 - in diabetes / diabetes mellitus
 - during/after oncological therapy
- Irritation & mechanical stress in everyday life**
 - excessive or inappropriate washing
 - friction/chafing from physical activity/cycling, tight clothing, sexual contact, shaving/hair removal
 - incontinence (urinary/fecal) and frequent cleaning/use of pads
- Diseases & inflammation**
 - skin diseases in the intimate area (e.g. lichen sclerosus, neurodermatitis, psoriasis)
 - chronic inflammatory bowel diseases (e.g. Crohn's disease, ulcerative colitis)
 - anal complaints (e.g. hemorrhoids, fissures/rhagades, anal eczema)
- Sensitivity & stress**
 - allergies/intolerances (e.g. fragrances, detergents, intimate products, panty liners)
 - stress can exacerbate symptoms

Deumavan®

Sensitive intimate skin is not unusual – what matters is products that provide acute relief without causing irritation and that help prevent problems in everyday life through gentle hygiene and care. Our focus since 2002: highly tolerable medical intimate protection and care products for women and men.

All products are available from your pharmacy without a prescription.

ACUTE RELIEF: FOR ITCHING, BURNING AND CHAFING IN THE EXTERNAL INTIMATE AND ANAL AREA

The cause of non-infectious intimate discomfort is usually a disrupted skin barrier. What helps: a protective, lipid-replenishing film that reduces friction.

Deumavan®
Protective Ointment Neutral

-  Alleviates itching, burning and chafing in the entire external intimate and anal area
-  Supports the natural skin barrier in protecting against moisture loss and reduces friction (fine protective film)
-  Hypoallergenic: without alcohol, without emulsifiers, without preservatives (e.g. parabens), without colorants
-  pH-friendly

How to Use & Important Information

- Apply thinly as needed – also as a preventative measure or as an accompanying treatment.

Do not use latex condoms and follow the instructions for use.

DAILY INTIMATE CARE: GENTLE CLEANSING

Gentle cleansing can help keep the natural skin barrier intact – especially for sensitive and/or dryness-prone intimate skin.

Deumavan®
Washing Lotion Neutral

-  Soap-free and hypoallergenic
-  Lipid-replenishing – also suitable for stressed intimate skin or for gentle intimate shaving
-  Suitable for anal and genital use
-  With lactic acid and pH-friendly

Intimate shaving –
how to make it gentler on intimate skin

- Use Deumavan Washing Lotion as a shaving lotion
- Use a sharp, clean blade and shave in the direction of hair growth; do not shave dry
- After shaving, gently pat the skin dry (do not rub)
- Then care for the skin (e. g. with Intimate Care Cream or Protective Ointment)

DAILY INTIMATE CARE: GENTLE SOOTHING

A consistent intimate care routine can help keep the external intimate skin smooth and supple while preventing irritation.

Deumavan®
Intimate Care Cream

-  With hyaluronic acid, aloe vera, and precious almond oil
-  Rapidly absorbed leaving your skin feeling pleasantly cared for*
-  Also suitable after hair removal
-  pH-friendly

When is an intimate care routine advisable?

- For sensitive skin prone to dryness/a feeling of tightness
- After intimate shaving/hair removal
- As a daily care routine for healthy external intimate skin

Do not use latex condoms.
